

LPE-200 APPLICATION NOTE

DS101283V1 LCD DISPLAY

The referenced display is used on the ROA1172318 CIRCUIT BOARD, FLEX ASSEMBLY.

There are two versions of the LCD display.
The DS101283V1 is the latest p/n and requires the presence of a diode for this display to work.

The diode, if present, is soldered across the LCD Connection pins.

If the customer has the diode already present on the ROA1172318 Flex Assembly only the DS101283V1 LCD Display is required to replace a defective display.

If there is no diode installed on the connector pins of The display the customer will need SPK-0120 which Includes the DS101283V1 LCD, the diode p/n A4036887P58 and other parts and instructions.

NLT stock lacks the diode to make the SPK-0121 kit.
We will offer the kit when the diode can be found.

If a customer has the earlier LCD, with no diode
He should consider ordering the ROA1172318
Circuit board assembly @ 100.00 or the complete
Front cover @ 150.00

**Note: if the diode is not present the
Display will work on the bench but
Will fade at cold temperatures.**
